<i>020316_5: Sunshine Groupe to provide their dust measurement data and demonstrate the measurements of dust from ppt to ppm³.</i>	Dust	Christian Buxton, Sunshine Groupe	02/03/16	July 2016 forum	<p>19/04/16: Robert McKie supplied the following response.</p> <p>Measurement is PM10 levels in $\mu\text{g}/\text{m}^3$. The current Action Level is average PM10 reading of $100 \mu\text{g}/\text{m}^3$ over a 10 minute period. Action levels are currently being reviewed. The EPA has provided advice on the setting of action levels.</p> <p>Over the past three years dust monitors have been continuously relocated around the site to assess certain work activities and potential generation of dust. In addition to this, historically there have been issues maintaining the site weather station, in particular wind direction data, that have now been rectified. As such it is difficult to provide numbers relating to trending on the site for dust generation. That said, our data shows air quality improvement in the area similar to that of the published EPA air monitoring results in Brooklyn when looking at days in exceedance of $50 \mu\text{g}/\text{m}^3$ for PM10 .</p>
